IN THE CLAIMS

Please dancel claims 1-32, and add the following new clams:

(New) An endoluminal prosthesis comprising: 33.

an elongate tubular member having luminal surface, an exterior surface and extending along a longitudinal axis;

a structural support member disposed on the luminal or exterior surface of said tubular member; and

an elongate securrement member having a length and a width and securing said structural support member to said tubular member, said securement member being helically arranged at an angle with respect to said longitudinal axis, said width of said securement member being less than 0.60 mm.

- (New) The endoluminal prosthesis according to claim 33, wherein said tubular 34. member is formed by conventional textile manufacturing processes.
- (New) The endoluminal prosthesis according to claim 33, wherein said elongate 35. tubular member comprises a sheet of ePTFE wrapped to form a tube.
- (New) The endoluminal prosthes according to claim 33, wherein said 36. securement member is a substantially flat, thin suture.
- (New) The endoluminal prosthesis according to claim 33, wherein said 37. securement member is formed of a textile material, said material being selected from the group consisting of PET, PTFE, and ePTFE.
- (New) The endoluminal prosthesis according to claim 33, wherein said 38. securement member secures said structural support member to said exterior surface of said tubular member.

- 39. (New) The endoluminal prosthesis according to claim 33, wherein said securement member is adhered to said tubular member.
- 40. (New) The endoluminal prosthesis according to claim 39, wherein said securement member is non-continuously adhered to said tubular member at certain points.
- 41. (New) The endoluminal prosthesis according to claim 39, wherein said securement member is continuously adhered to said tubular member, wherever said securement member interfaces with said tubular member.
